THE MATTRESS

Bellini with Air Suspension differentiated areas and independent micro pocket springs is the evolution of Micro Pocket springs. The very high number of springs and the particular Air Suspension system allow to obtain a higher sensitivity in the adaptation of the spinal column, ensuring a more ergonomic and comfortable rest. Each single spring is coated independently with tissue in order to avoid getting stuck and to differentiate every change of weight. The structure is composed of micro springs at different lift and height to respect the different pressure loads of the body. In this way the mattress adapts ergonomically offering a correct support. The very high quality of the springs ensures a long service life of the mattress. The high density and CFC free Memory Foam Waterlily Box is expanded with a water system with open cells to guarantee the breathability and the inalterability of the mattress. The technical materials created with sophisticated processing systems make this product hygienically perfect and air-conditioned. The breathability of the mattress is achieved with materials with open cells, so as to avoid the formation of moulds. The technical antibacterial and antiacarus covering is completely removable and washable with water. The Air suspension micro pocket springs mattresses are among the best available in the market of spring mattresses. They are long-lasting and very comfortable.
